Breed Descriptor of Rathi (Cattle)

Breeding Tract				
State: Rajasthan	Jaisalmer			
	Ganganagar			
	Bikaner			
Location				
Longitude (deg.)	72 75.			
Latitude (deg.)	27 30.			
General Information				
Synonyms				
Origin	It takes its name from a pastroal tribe called Raths who			
	are Muslims of Rajput extraction and lead a nomadic life.			
	Rathi cattle seems to have originated from the mixture of			
	Sahiwal, Red Sindhi, Tharparkar and Dhanni breeds			
	apparently with a preponderance of Sahiwal blood.			
Major utility	Food - Milk			
Comments on utility				
Comments on breeding	Rathi animals are particularly concentarted in			
tract	Loonkaransar te	hsil of Bikaner di	strict which is also	
	known as Rathi tract.			
Adaptability to environment	The breed is well adapted to desert conditions.			
Population

Management		•	•	
Management system	Semi-Intensive			
Mobility	Nomadic/Stationary			
Feeding of adults	Grazing, Fodder and Concentrate			

Comments on Management	Scarcity of fodder and water is endemic and become acute during summer. Vegetation is very poor. Animals graze on sparse grasses and small bushes. Most of the animals are owned and bred by nomads, who move with their herds in the tract from one place to another depending on the availability of water and grazing pasture. Wheat straw, pala leaves and chaffed sewan grasses are fed to animals. Chaffed sorghum and pearl millet when available are substituted for grasses and leaves. Dry stalks of sorghum and pearl millet are also fed in lean season. Lactating animals are provided concentrate mixture in proportion to their production. Animals are generally not provided with shelter except during extreme weather.			
Morphology				
Colour	The animals are usually brown with white patches all over the body, but animals having completely brown, or black coat with white patches are often encountered. The lower body parts are generally lighter in colour as compareed to the rest of body.			
Horn shape and size	Horns are curving outward, upward and inward. Horns			
Tiom shape and size	are short to medium in size.			
Visible characteristics	Face - broad between eyes and slightly dished. Dewlap - Fine and loose. Tail - long, fine tapering to a good black or white switch well below the hock.			
	Male	Female	Overall	
Height (avg. cm.)		114.92		
Body Length (avg. cm.)		131.33		
Heart girth (avg. cm.)		165.78		
Body weight (avg. kg.)		295.0		
Birth weight (avg. kg.)	19.1	18.9		
Performance				
	Average	Minimum	Maximum	
Age at first parturition (months)	46.4	36.0	52.0	
Parturition interval (months)	17.07	14.0	20.0	
Milk yield per lactation (kg)	1560.0	1062.0	2810.0	
Milk Fat (%)		3.7	4.0	
Any Peculiarity of the breed		10.7	1
